In search of better sleep?

Discover the remedē® System

**NON-MASK THERAPY FOR
CENTRAL SLEEP APNEA (CSA)**

What is Central Sleep Apnea (CSA)?

Most people associate “sleep apnea” with a specific sleep disorder called Obstructive Sleep Apnea (OSA).

People with OSA often snore and have difficulty breathing well during the night because the upper airway is partially or completely blocked. People with CSA have irregular breathing during the night because the brain fails to communicate properly with the diaphragm.

Central Sleep Apnea (CSA)
occurs when the part of the brain that controls your breathing does not function correctly during sleep.

Obstructive Sleep Apnea (OSA)
is caused by blockages in the upper airway that restrict oxygen to the body.

What does CSA look like?

Untreated CSA causes a disrupted breathing pattern:

What does CSA feel like?

Untreated CSA can lead to a number of symptoms that can disrupt your nights and your days:^{1,2}

Why treat CSA?

Because CSA causes symptoms similar to those of obstructive sleep apnea, heart failure, atrial fibrillation, and other medical conditions, it can be difficult for people to know whether their feelings of poor health are due to CSA or other serious conditions.

Additionally, CSA is common among people with heart disease, especially heart failure and atrial fibrillation.^{3,4}

Over the long-term, untreated CSA results in low oxygen levels, which are linked to high blood pressure, abnormal heart rhythm, heart attack, and even death.⁴

BETTER DAYS
start with
BETTER NIGHTS*

Discover the **remedē**® System

If restless nights are disrupting your days, it may be time to consider the **remedē** System—the first and only FDA-approved non-mask therapy designed to treat moderate to severe central sleep apnea in adults.

Breathe easier, sleep easier—treat CSA without masks or medications

remedē is a small, implantable device that activates automatically and restores a more normal breathing pattern—enabling you to treat your CSA without a mask or medications. **remedē** is designed to help you rest easy, sleep peacefully — and have more energy for what you love.

How it works

The **remedē** System automatically turns on and stimulates the diaphragm to restore breathing in the same way the brain does.

Clinically proven to improve sleep, breathing and quality of life

78% of patients reported improved quality of life using the Patient Global Assessment⁵

96% reduction in Central Apnea Index at 1 year⁶

95% of patients said they would elect to have the medical procedure again⁵

Improvements in sleep disordered breathing and quality sustained out to **5 years**⁶

A photograph of a man and two young boys walking in a grassy park. The man is holding a soccer ball and the hand of one of the boys. They are all smiling and looking towards the camera. The background is filled with green trees and foliage.

"When my system got turned on for the first time, I felt like it was the first time I had slept in over ten years."

Shawn J., remedē System recipient | Belton, MO

Getting the **remedē**® System

1. Before getting your **remedē** System

Your doctor may order a sleep study to help determine whether you have central sleep apnea and if you're a good candidate for the **remedē** System.

2. On the day of your procedure

Your doctor will place your system under the skin in your upper chest area. Most people who receive the **remedē** System stay overnight in the hospital and go home the next day. You will be able to get back to most of your daily routine within a week.

3. Over the first three months of therapy

You will work with your doctor to customize the therapy for your individual needs to ensure that you receive optimal treatment for your central sleep apnea.

Frequently asked questions7

How do I know if the remedē System is right for me?

The **remedē** System is approved by the Food and Drug Administration (FDA) to treat moderate to severe central sleep apnea (CSA) in adults. To determine the type and severity of sleep apnea you have, and whether **remedē** is right for you, talk to your doctor. Please note that the **remedē** System should not be placed if an active infection is present.

Is the remedē System covered by insurance?

The **remedē** System is being covered by an increasing number of insurance plans, but every insurance plan is different. Your medical team will work with you, your hospital, and your insurance company to assess whether the **remedē** System will be covered by insurance.

What if I already have a pacemaker or other cardiac device?

Because most pacemakers and cardiac devices are usually implanted on the left side of the chest, it may still be possible to receive the **remedē** System, which can be implanted on either side of the chest.

***"After getting the device I found
I could do things that I couldn't
before because I had more energy."***

Bob S., remedē System recipient, Odessa, MO

Ask your doctor if **remedē** is right for you Because better days start with better nights.

Important Safety Information

The **remedē**® System is indicated for moderate to severe Central Sleep Apnea in adult patients. Your doctor will need to evaluate your condition to determine if the **remedē** System is right for you. The **remedē** System is MR Conditional but conditions apply. Please make sure that your physician knows about the conditions and precautions to ensure safety, which can be found in the **remedē** System MRI guidelines manual. You should not have the **remedē** System implanted if you have an infection and you will not be able to have diathermy (special heat therapies) after implantation. The **remedē** System may be used if you have another stimulation device such as a heart pacemaker or defibrillator; special testing will be needed to ensure the devices are not interacting. As with any surgically implanted device, there are risks related to the surgical procedure itself which may include, but are not limited to, pain, swelling, and infection. Once the therapy is turned on, some patients may experience discomfort from stimulation and/or from the presence of the device. The majority of these events are resolved either on their own or by adjusting the therapy settings. The **remedē** System may not work for everyone. There are additional risks associated with removing your system. If you and your doctor decide to remove the system, another surgery will be required.

Be sure to talk with your doctor so that you thoroughly understand all of the risks and benefits associated with the implantation of the **remedē** System.

Rx only. For further information, please visit remede.zoll.com, call +1-952-540-4470 or email info@remede.zoll.com.
